Pointing to New Highs...However...

October 30, 2019

Recent new highs in the S&P 500 Index could lead to a nice mini-rally for stocks.

Looking beyond, however, the U.S. election season is usually a drag on the equity market. And the 2020 election season promises to be more contentious than most.

Equities may sustain the recent technical breakout and move higher, although gains may not be robust.

Technical Breakout May Push Stocks Higher

Federal Reserve interest rate cuts have seemingly eased some concern over a full blown equity stall, and the U.S. and China are haltingly stepping toward some near-term trade accord. Both issues have helped lead to an improvement in investor sentiment and a recovery in stock prices. Notably, U.S. and developed foreign markets have recovered to reach all-time highs. The question is will they be able to hold key technical price levels? Meanwhile, emerging market equities are still mired in a relative slump as a downtrend in that market has been forming, since the April 2019 highs.

Our expectation that economic conditions may improve from recent troughs and that U.S./China trade relations could be more constructive than not leave us to believe that new highs in the S&P 500 Index and the MSCI EAFE Index may indeed be sustained. That is, a breakout of new highs may cause a mini rally for stocks in general. However, any rally, in our view, is unlikely to be long-lasting or dramatic. Obstacles to a long-

standing rally likely include corporate profitability numbers that have been sliding and full equity valuations. Add to this the likely 2020 election season worry and you get a market that may prove to be a little soft as we turn the corner to next year.

Largely, Emerging Markets have continued to underperform domestic and foreign developed markets since 2010.

Watching Profitability Closely

While trade talk and Fed policy have made all the financial market headlines, a key development for us has been the recent trajectory in corporate profitability. Profit margins across the globe have been under some pressure, particularly in emerging markets. Therefore, investors may be less likely to pay a premium for equity market exposure. This trend is a key reason we may see only a limited rally if we are indeed able to hold the recent new equity highs.

Declining profit margins may mean investors will be less likely to pay premium valuations for equity exposure.

Keeping an Eye on the Election Cycle

History has shown that equity returns in an election year, or a fourth year of a U.S. presidency can be suboptimal as investors become bogged down by the uncertainty of it all. This election cycle is shaping up to be perhaps the most contentious in modern history. Should President Trump overcome the Democrats’ impeachment thrust, he likely stands to face a Democrat nominee with diametrically opposing views to his own. The resulting theatre may present some uncertainty for investors, particularly if Trump emerges politically wounded by the impeachment machinations. With this in mind, we believe 2020 may not be a year in which investors feel comfortable taking unchecked risk, especially coming off strong equity performance in this 3rd year of the election cycle.

Our bottom line is that we remain constructive on equity exposure, however, sustainable new highs we may see in the coming weeks/ months may not be robust. Equity prices could eventually run headlong into some of the obstacles we mentioned. So we would maintain a slight overweight to equities, but suggest that investors cap their excitement a bit as we ascend to new price levels.

Risks

Investors should be aware of the risks associated with all portfolio strategies, and variable market conditions. Monetary policy changes, military activity abroad, the level and change in market interest rates, corporate earnings, domestic and foreign governmental policies, global economic data, and other geopolitical events can have a substantial effect on portfolio performance, our macroeconomic theories, and the effectiveness of strategic and tactical portfolio approaches.
